Main trends and patterns in Women’s Football Migration

Paper presented at the International conference “Globalization, Migration and Development: The role of Football from a transnational perspective,” at Maastricht University, co-organized by Sport Science Institute of the University of Lausanne, 23 June 2011

Nina Clara Tiesler, ICS-UL
Main trends & patterns in women’s football migration

Abstract

In the last twenty years, a phenomenon has emerged which is entirely new in the study of gender, migration, women and sport, namely the international migration of female football talent and labour. Just as boys all over the world, also a growing number of girls dream about becoming a professional footballer and pursue this dream at intensively investing into their skills over years. The number of registered players has in fact more than doubled since 2000, with now over 30 million female footballers; but until date, “making a living” as a female football player is only possible in 17 out of 168 FIFA-listed women’s football countries. This means for highly talented and skilled women in 90% of the countries that they actually have to leave their home in order to act as professionals.

The percentage of top players who leave the “developing countries” of women’s football is at levels of up to 80%, while migrants constitute between 36 up to 50% of players in premier league clubs of the “core countries”. The paper will analyze main trends and patterns in women’s football migration at following these questions:

a) Are the fluxes mainly from South to North and North to West? Do they expand beyond traditional geographical limits and assume globalized characteristics?

b) What makes women leave (structural, super-structural, subjective reasons)?

c) How far do motives, experiences and outcomes of migration projects differ between the developing and core countries of WF?

The logics of this migratory process shall be approached by presenting quantitative data on fluxes and qualitative material on the women’s migration projects which derived from an ethnographic case study on Portuguese players and from interviews with Norwegian and Brazilian female football migrants. The paper concludes by approaching the open question, if and how migration is increasing substantially and which are the opportunities and challenges for players, key agents and -parties involved.
International Migration of Women Footballers

Introduction: some numbers

- 40 countries, 800 national squad players: 190 abroad
- Extreme case Ireland: 80% top level players abroad
- 2000-2010: hundreds of Scandinavians in the USA
- Among ca. 170 FIFA-countries only 17-20 can provide (semi-) professional contracts
- Players from 90% of these countries have to leave home in order to become professionals
- Clubs in the Swedish women’s premier league Damallsvenskan: up to 50% expatriates
# Main trends in Women’s Football Migration

## Introduction

### Main themes

**International Migration of Women Footballers**  
*Why studying a quantitatively rather small migratory movement?*

- 4 Comparable migrant groups  
  *decision making process*
- Professionalization process  
  *motor & consequence*
- WF as both subject & object of social change  
  *gender systems*

### Main questions

- Are the fluxes increasing substantially; from South to North and North to West?
- What are the main features?
- What makes women leave (structural, super-structural, subjective reasons)?
- How far do motives, experiences and outcomes of migration projects differ between the developing and core countries of WF?
Main trends in Women’s Football Migration

Main features to showcase

1. Structural inequality in WF; fluxes North-Northwest; midfield and core countries heavily involved
2. Geographical & cultural proximity; friends (of friends)
3. Women Football Migrants share single features with comparable migrant groups but do not match with any of them.
4. Migration projects in WF differ in core- and developing countries.
5. The particular life course and biographical phase of the potential migrants play an important role.
Core- and developing countries, newcomers

### Infrastructure

- **Norway:** 4,000 teams, 60,000 players
- **USA:** 791 college teams, WUSA & WPS
- **Japan:** 1,138 teams, 10 Pro & 50 college teams, 23,000 active
- **Sweden:** commercialization
- **Germany:** transfer-market

#### Strong

- China: 10 elite pro-teams
- France: football academies
- Denmark, Italy: semi-professional contracts for expatriates
- Brazil: single clubs, “talent exporter”

#### Middle

- Korea Republic: 65 teams from elementary school to top level
- Generally: African, South American, Middle Eastern countries
- In Europe: Portugal, Ukraine, Poland, Romania, Wales, Ireland
Global inequalities causing migration

Structural conditions for women’s football

- Organisation of leagues
  - coaching, age-groups
  - sponsoring, funding
  - support programs in schools

- Stigma vs. Recognition
  - hetero-normative concepts of femininity
  - body concepts
  - fertility
  - homophobia

- Gender systems
  - gender roles
  - equality in employment sector
  - women in the public sphere
  - women in sports

Leaving for the Passion and the Cause?

**Typology of migration projects**

a) **top level players who sign with WPS** teams or gain scholarships in the US high school soccer system

b) **diaspora-players** (e.g. descendents from Portuguese emigrants in the USA, Germany, France and Brazil who play for the Portuguese national squad; known also for Mexicans/USA, Irish/USA and Israeli/USA)

c) **players who leave “core countries of WF”** to gain transnational football experience or for simply playing abroad after retiring from their national squad

d) **players who leave "WF developing countries”** in order to play as professionals

e) African and Southern American **players who migrate partly to sustain their families** back home

f) **players** who migrate to more wealthy or advanced countries, in order to combine their dream to play as professionals **with educational purposes**

g) **players who have long-term emigration aspirations**, trying to build an existence in the host society which reaches beyond the period of their football career

h) **12-15 years-old-players who lack a domestic league** for their age group

i) **players “fleeing” from miserable** structural (economic, organisation, coaching) and socio-cultural (stigma) **conditions** for WF
